PLATFORM TROLLEY

Platform trolley, transport trolley, folding trolley, stainless steel

Description

The robust transport trolley made of stainless steel (alloy SS201) has an enormously stable construction and thus brings with it a long service life in continuous use.

The loading area of 20,47 in x 32,28 in with a maximum load of 331 lbs makes it possible to transport any materials, such as pots, beverage crates, suitcases or packages without much effort. The platform trolley is ideal for use in hotels, large kitchens or catering services. Especially in catering services, the stainless steel transport trolley with folding handle is transported to the next location and used on site in a very space-saving way. The folding handle is operated with the foot, so the stainless steel platform trolley can be folded or unfolded in a few seconds.

The high-quality PVC Wheels with ball bearings ensure pleasant, quiet transport and absorb vibrations on uneven floors. The 4 swivel castors make the folding trolley very manoeuvrable and easy to use even in confined spaces.

The rounded corners of the platform ensure that there is no risk of injury. Due to the stable construction of the trolley, even heavy loads of up to 331 lbs can be transported safely (assuming even distribution).

Features

- Durable due to robust construction
- Ideally suited for use in the catering trade, hotels and care facilities
- Space-saving thanks to folding handle
- Load capacity 331 lbs
